Sheet1

Ready Accessibility: Good to go

- Update:** Manager can update the data of employees. Cell number needs to be entered for updating the respective word.

- Search:** Manager can search any information related to employees by entering respective word

STAFF

It has two categories:

- Cleaning staff
- caretaker

1. Cleaning Staff

We have divided the cleaning staff in two parts

- washroom cleaning
- zoo cleaning

These staff are responsible for cleaning. Everytime when they do their work entry needs to be done with their respective IDs.

They have access to update their work and based on this record attendance and their performance would be marked accordingly by manager.

SUMMERY

We have used all the required functionalities like add, update, view, search, or delete records, which makes it easier for the user to manage the system.

It also makes it easier for the manager to overview the records of employees and make required updates on a daily basis.

Helps in managing inventory related to animal care, including food supplies and food stock. The inventory manager can track the record of food items, which makes it easier for him to know when the food stock is in need.

We have kept the login ID password system for security reasons. Everyone has their own unique ID and password. They need to input ID and password to get access to any system.
